

U.S. Geological Survey Professional Paper Volume 1408

Filesize: 6.51 MB

Reviews

This publication is fantastic. We have read through and i am certain that i will planning to read yet again yet again down the road. You wont feel monotony at at any time of your respective time (that's what catalogs are for concerning when you request me).

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1902 Excerpt: .RtJ 4-river-stage or spring-outlet altitude; Q.Jk-recharge or discharge (wells); and hmi. k-head at time step m. In the modeling process, an aquifer is discretized into a number of blocks, and a set of algebraic equations similar to equation (3) is used to represent flow into and out of each block. These equations are solved simultaneously, usually using an iterating solution technique to solve the flow equation (equation 2). The large number of calculations requires the use of a computer. GRID AND BOUNDARY CONDITIONS The eastern Snake River Plain was subdivided areally as shown in figure 21. Blocks within the model boundary (active blocks) were assigned values of transmissivity, storage coefficient, and recharge. Blocks outside the model boundary (inactive blocks) were assigned values of zero. The grid was aligned in a southwest to northeast direction to minimize the number of inactive blocks and to align the x-axis in the principal direction of ground-water flow (pl. 4). Point of origin of the model grid (southwest corner) is at lat 4155 10.00, long 11428 55.00. The Transverse Mercator projection system was used with a central meridian of 11330 ; the model grid was rotated 3124 counterclockwise from the central meridian. The grid used in the three-dimensional model is parallel to that used in the two-dimensional model, but the grid spacing is slightly greater--4 mi in the three-dimensional model as compared with 3.95 mi in the two-dimensional model. An even-mile grid facilitated use of Landsat-derived land-use data. Horizontal and vertical...
