The extent of the examination made for quality may vary from a visual examination of the water to a complete analysis, depending upon the use for which the water is intended. If the water is for steam purposes samples should be obtained for chemical analyses. It is best to obtain these samples at the end of each pumping test, because the water is usually more representative at that time. One gallon glass-stoppered bottles are satisfactory for sampling. They should be cleaned carefully and their stoppers tied down with cloth. After a bottle is thoroughly rinsed with the water to be sampled, it should then be emptied and the sample collected. The bottle should be filled excepting for a small space provided for possible expansion. This sample, together with a complete description of the well, date the sample was taken and temperatures of both the air and the water should be furnished the chemist. A rough sketch of the surroundings of the well, showing distances to houses, barns and other objects that might affect the quality of the water, is valuable information to send with the sample. It is best for one never to pass judgment upon a water, the history of which is not thoroughly known. In water supply work it is convenient to have the water analyses reported in grains per U. S. gallon, but if the analyses are expressed in parts per million, conversion from the...
